SONGSCRIBE

Your story, turned into a song.

SongScribe AI generates complete songs — lyrics, vocals and music — from a personal brief, in “typically 30–60 seconds”, with a licence certificate on paid orders. [Self-reported]

Thesis: occasion-led packaging, clear licences and African genre fluency can win the gift, creator and SMB-jingle buyer that prompt-box tools leave to studios.

investor deck · october 2026

No studios.
No producers.
No waiting.

pitch line on songscribe.ai [Self-reported]

Every claim carries its evidence status; unknown is never shown as zero.

Cofounders Zino Mario and Excel Chukwu [Owner-provided]

SONGSCRIBE AI LTD, England, no. 17031583 [Verified public]

Operating base: Lagos, Nigeria [Assumption · medium confidence]

A2 · at a glance

An English company, a Nigerian operating story, and one entity question to settle.

SONGSCRIBE AI LTD, company no. 17031583, private limited, Active [Verified public]

Incorporated **13 February 2026**; registered office Taverham, Norwich, England [Verified public]

SIC 59200 — sound recording and music publishing [Verified public]

Sole director and sole PSC (≥75% shares and votes): Mario-Ghae Efezino [Verified public]

Terms (effective 17 Nov 2025) name **“SongScribe Ltd”** under the law of the Federal Republic of Nigeria [Self-reported]

Payments via Stripe, Flutterwave, Payoneer and Seerbit [Self-reported]

Founder “BASED IN Lagos, Nigeria” [Self-reported · zinomario.com]

A Nigerian CAC entity: not found; the portal could not be queried [Unknown]

The link between the UK company and the songscribe.ai brand is an assumption with high confidence. The Terms pre-date the UK company by about three months — a document fix for the founders.

A3 · problem

A song for a person, a brand or a channel still means a studio, a producer and a wait.

~$199

Typical price of a human-made personalised song from Songfinch, the gift incumbent, with 3–7 day delivery and a personal-use licence.

[Verified public · Digital Music News]

3–7 days

Too slow for the moment it is for: the birthday, the proposal, the campaign launch next week.

[Verified public · same report]

rights?

Creators and small brands need music they can actually use in ads and monetised video, with a licence they can show.

[Assumption]

As of October 2026, businesses, creators and families who want a custom song find it expensive and slow: about $199 and 3–7 days for a human-made personalised song.

The research cites no survey of buyer demand. The price anchor is a third-party report on one competitor, not a market average.

A4 · solution

Tell it the story. Get two finished songs in about a minute.

01 brief

Story, not a prompt box

An eight-step guided form, or the conversational AI Producer by chat or voice. Names, memories, occasion, genre, mood.

02 generate

30–60 seconds

Complete song: lyrics, vocals and music. Each generation returns two variations. AI-written lyrics, your own, or instrumental.

03 refine

Revise freely

Change genre, mood or lyrics. The AI Producer shows the credit cost and waits for confirmation before spending.

04 license

Download with rights

MP3 and WAV (lossless on higher tiers), a PDF licence certificate per paid order, a library kept “indefinitely”.

[Self-reported] All steps as described on songscribe.ai and in the FAQ answers in the site bundle (fetched 2026-10-18). Not independently tested for this deck.

A5 · product

What is public today — and the one thing that is not.

Capability	Evidence	Status
Free demo — 10 AI variations per day, 60-second previews, no downloads	Public pricing page, no sign-up	[Self-reported · offered publicly]
Paid plans Starter to Studio, with downloads and licences	Public pricing page, USD	[Self-reported]
Sample library — acoustic, hip-hop/trap, R&B, Afrobeat, Amapiano, gospel, EDM house, instrumentals	/samples; files served from a public Cloudflare R2 bucket	[Verified public · hosting observed]
Multi-language lyrics, e.g. a wedding song blending English, pidgin and Yoruba	FAQ: "Quality may vary by language"	[Self-reported]
Agency & Enterprise — white-label, API access, custom licensing	/licensing, "Contact Sales"	[Self-reported · availability unverified]
Market window — the product is deployed and live with paid plans	songscribe.ai, as of October 2026	[Self-reported]
Underlying generation model or vendor	Not disclosed anywhere	[Unknown]

A6 · difference

SongScribe does not try to out-model Suno. It packages the song for the moment.

A6.1 [Self-reported]

Story-first personalisation

Names, memories and occasions drive the brief, not a blank prompt.

A6.2 [Self-reported]

Afrobeat, Amapiano, Yoruba, pidgin

Genre and language fluency for African and diaspora buyers.

A6.3 [Self-reported]

Plan-based licensing

Personal to commercial to exclusive, with an “Official Ownership Certificate”.

[Assumption] The competition is on packaging and genre, not model capability — so licence warranties and margin depend on whichever model vendor sits underneath.

B1 · market

People already pay for AI songs. Africa is the fast-growing edge.

$29.6B

Global recorded music revenue, 2024, up 4.8% (IFPI).

+22.6%

Growing demand: Sub-Saharan Africa recorded-music revenue grew 22.6% in 2024, to $110M — the second-fastest region (IFPI).

€9B

Projected 2028 revenue of Gen-AI music and AV providers, from €0.3B; output market to €64B (CISAC / PMP, projection).

~$200M

Suno's reported annual revenue at a $2.45B valuation, Nov 2025.

[Verified public] IFPI Global Music Report 2025 via musicbusinessworldwide.com and musicinafrica.net/node/358892 · CISAC, Dec 2024: cisac.org/Newsroom/news-releases/global-economic-study-shows-human-creators-future-risk-generative-ai · TechCrunch, 2025-11-19 · all fetched 2026-10-18. CISAC figures are projections.

Expansion plan (as of October 2026): expand into the agency and enterprise market with white-label licensing and API access, offered today through Contact Sales.

B2 · sizing

TAM ≈ €4.5B · SAM ≈ €135M · SOM ≈ €1.35M/yr

Every line is an Assumption. Only the €9B base is sourced, and it is itself a 2028 projection.

TAM [Assumption]	CISAC 2028 Gen-AI provider revenue, music and AV, €9B × 50% music share	**≈ €4.5B**
SAM [Assumption]	Serviceable market, an estimate from stated assumptions (as of October 2026). Personalised songs, SMB jingles and creator music for Africa, the diaspora and English-speaking SMBs: 3% of TAM	**≈ €135M**
SOM [Assumption]	1% of SAM within about 3–5 years	**≈ €1.35M / yr**
cross-check [Assumption]	5,000 paying subscribers × blended $15 per month (weighted to Starter and Creator) × 12	**≈ $0.9M ARR**

B3 · model

Freemium credits, priced by licence strength.

Plan [Self-reported]	USD / month	Credits / month	Licence
Free	0	3,000 to start	Preview only
Starter	7	12,000	Personal use
Creator (Popular)	19	40,000	Commercial
Pro	69	150,000	Exclusive
Studio	179	600,000	Full rights, team
Agency & Enterprise	Contact	Bulk	Custom, white-label, API

what diligence will find
[Verified public · observed on live site]

- Four different tier schemes across /pricing, the FAQ, /terms and /licensing
- FAQ: Studio Pro $199/mo; pricing page: Studio $179/mo
- Credits per generation not published
- Top-ups expire after 12 months; refunds: “all purchases are final”

Reading [Assumption]: the company moved from one-time per-song tiers to monthly credit plans without updating the FAQ, terms or licensing copy. Prices fetched 2026-10-18.

B4 · segments

Three buyers, one engine.

personal [Self-reported]

- Birthdays, anniversaries, proposals
- Weddings, Valentine’s, “missing someone”
- Family and kids

creators [Self-reported]

- YouTubers, podcasters, film makers
- Intros, outros, background and theme music
- Product reviewers

businesses & brands [Self-reported]

- Brand anthems, ads, launches
- Sonic logos and jingles
- Also listed: church and ministry, events, film and TV

Published channels [Self-reported] — Agency & Enterprise plans are sold through direct sales (Contact Sales); free demo with no sign-up; sample pages with “Create Like This”; Agency & Enterprise “Contact Sales”; Business & Licensing contact route.

Likely motion [Assumption] — occasion-led social sharing; the founder’s network and church communities; diaspora gifting over Stripe plus African payment rails.

B5 · competition

A category with a $2.45B leader and a $199 human incumbent.

Competitor	Model	Public data point
Suno	Prompt-to-song, subscription	$250M Series C at $2.45B; ~$200M annual revenue (TechCrunch, Nov 2025); settled with Warner Music, Nov 2025 (Fortune) [Verified public]
Udio	Prompt-to-song	Settlements and partnerships with UMG and Warner reported, late 2025 (Boston Globe) [Verified public]
Songfinch	Human-made personalised songs	~$199 per song, 3–7 days, personal-use licence (Digital Music News) [Verified public]
ElevenLabs Music	AI music, commercially cleared	Not individually verified [Unknown]
Soundraw, Beatoven.ai, Mubert, Loudly	Royalty-free AI background music	Category comparators
Sonic-branding agencies, local jingle producers	Human, bespoke	The price point SongScribe undercuts for SMB jingles [Assumption]

[Self-reported] As of October 2026: unlike human-made song services at about $199 and 3–7 days, SongScribe returns two variations in 30–60 seconds at a lower price. Every paid plan includes licensed use, from personal to commercial to exclusive, with an ownership certificate.

B6 · moat

The moat is not the model. It is the brief, the licence and the market.

what can compound [Assumption]

Occasion data — a library of story briefs, genres and revisions by occasion and culture

Licence trust — certificates buyers can show to clients, platforms and brands, if chain of title is solid

Local rails and genres — Flutterwave and Seerbit payments; Afrobeat, Amapiano, Yoruba and pidgin

what can erode it [Assumption]

Suno and Udio set consumer price expectations and could add gifting flows

Resold third-party models put margin and licence warranties in a vendor's hands

The model, its terms and its training-data licences are undisclosed

[Unknown]

B7 · traction

No traction is published yet. Unknown is not zero.

what is public	what is not public
A live, priced product with a free demo and paid plans [Self-reported]	Users, paying users, songs generated [Unknown]
A sample library presented as “Real songs created in seconds” [Self-reported]	Revenue or MRR, conversion from free [Unknown]
Several samples appear to be personal commissions; none is a published testimonial [Assumption]	Churn, refunds and chargebacks [Unknown]
	Testimonials or customer logos [Unknown]

These are the first numbers to request. Segment them by personal, creator and brand, and by geography.

B8 · planning

Planning assumptions — not actual results

SongScribe publishes no revenue, users or costs. These scenarios only scale the research's subscriber assumption. They are not forecasts and not company figures.

Scenario [Assumption]	Paying subscribers	Blended $/month	ARR
Early	1,000	15	$0.18M
Research cross-check	5,000	15	$0.9M
Stretch	10,000	15	$1.8M

Arithmetic: subscribers × $15 × 12. The $15 blend sits between the published Starter ($7) and Creator ($19) prices.

inputs still unknown

- Model or vendor cost per generated song [Unknown]
- Credits consumed per generation [Unknown]
- Free-to-paid conversion and churn [Unknown]
- Top-up and enterprise revenue mix [Unknown]

C1 · roadmap

“As simple and universal as sending a message.”

stated direction [Self-reported]

- Founder’s vision: studio-grade music creation “as simple and universal as sending a message” (zinomario.com)
- Agency & Enterprise: bulk pricing, custom licensing, white-label and API access (/licensing)
- Two variations per generation today; “unlimited” on the top subscription per the FAQ

next steps the evidence calls for [Assumption]

- One reconciled price list across pricing, FAQ, terms and licensing
- Machine-readable AI marking on outputs for EU distribution (AI Act Art. 50, applicable from 2 Aug 2026)
- Disclose the model vendor and its output and training-data terms
- Align the contracting entity in the Terms with the UK company

Scalability [Assumption]: software delivery is global; cost per song and licence quality scale with the upstream model vendor’s pricing and terms.

C2 · team

Credits

Zino Mario

Cofounder [Owner-provided · cofounder role]

Sole director and ≥75% PSC of SONGSCRIBE AI LTD, registered as Mario-Ghae Efezino [Verified public]

Founder and CEO of Zino Aviation, Lagos (Nairametrics, 2026-07-19) [Verified public]

“Multi-instrumentalist and music producer”; founder of SongScribe AI [Self-reported · zinomario.com]

Previously founded Zino Aviation (2018, Lagos), which he leads as CEO; experience as a licensed pilot in Nigeria and the UK (as of October 2026) [Self-reported]

Excel Chukwu

Cofounder [Owner-provided · cofounder role]

Not named on songscribe.ai; not an officer or PSC of the UK company [Verified public · register]

With Zino Mario at ≥75%, all other shareholders hold at most 25% in the UK company [Verified public · PSC filing]

Role, equity, vesting and professional background [Unknown]

Founder bandwidth is a diligence point: Zino Mario also leads Zino Aviation and KUUZA AI, and is a Partner at FDN Capital Partners.

C3 · risks

Chain of title is the risk that decides the rest.

Risk	Why it matters	Mitigation [Assumption]
Chain of title and model provenance	Exclusive and "full rights" grants are only as good as the undisclosed model's training data and terms; label suits against Suno and Udio were only partly settled in late 2025	Name the vendor; secure licensed-data warranties and indemnities
Copyrightability — US human-authorship rule; UK CDPA s9(3); Nigerian Copyright Act 2022 untested	"Ownership certificates" and Content ID claims on AI output can trigger disputes	Legal opinion per market; reword certificates
EU AI Act Art. 50; ELVIS Act and voice-likeness laws	AI audio must be machine-marked for EU distribution; sound-alike bans alone are not enough	Watermark or metadata on every output
Pricing and terms — four tier schemes; strict no-refund; NDPA, FCCPC, UK CCR 2013	Consumer complaints and chargebacks	One price list; compliant cancellation flow
Entity mismatch; minors from 13 and real names in songs	Terms name a different company; personal data of young users	Fix the contracting entity; age and data controls
Commoditisation; founder bandwidth	Suno and Udio pricing; several ventures; cofounder role unclear	Focus on occasion and licence packaging; state time commitment

C4 · funding

Funding: to be confirmed by the founders.

No raise, round size, valuation or use of funds has been published, and none is assumed here. Funding raised to date: none found publicly — unknown, not zero. [Unknown]

what the founders need to supply

- Amount sought, instrument and valuation expectations [Unknown]
- Use of funds by line: model and licensing, product, marketing, legal [Unknown]
- Runway and monthly burn [Unknown]

and the structure it sits on

- Entity map: UK SONGSCRIBE AI LTD vs. any Nigerian “SongScribe Ltd” [Unknown]
- Cap table, Excel Chukwu’s equity, vesting and IP assignment [Unknown]
- Which entity contracts with users and receives payments [Unknown]

C5 · next steps

A priced product in a paying category. Now prove the rights and the revenue.

the opportunity

Live product with published prices from $7 a month [Self-reported]

Proven willingness to pay for AI songs (Suno ~$200M revenue) and a $199 human price anchor [Verified public]

African genre and language fluency; Sub-Saharan Africa grew 22.6% in 2024, the second-fastest region [Self-reported] [Verified public]

A verified UK company controlled by the founder [Verified public]

Contact (published): support@songscribe.ai [Self-reported]

the data-room request

Model vendor, terms, training-data licences, indemnities

Paying users, MRR, conversion, churn, refunds by segment

Reconciled price list and credits per generation

Entity map, cap table, IP assignment

Copyright and AI Act Art. 50 legal opinion; data-hosting map
