KUUZA AI — illustrative high-growth scenario

Illustrative high-growth scenario — synthetic evidence. Not the company's actual performance. Every figure below is invented for illustration. The company's real Capital Q assessment is separate and is computed only from its own evidence.

Scenario illustrative-high-growth-v1 · Unicorn Potential method unicorn-potential.v1.0.0 (input rules unicorn-potential-inputs.v4) · Investability method investiq/v2+investability-inputs.v3 · engine unchanged · clock 2026-10-18T00:00:00.000Z

Result on synthetic evidence

Unicorn Potential: 75/100 · STRONG_SIGNALS · confidence LOW · coverage 96% · stage band PRE_SEED

Investability (reported separately): 58/100 · INVESTABLE · confidence LOW · provisional · 3/46 criteria, 0/8 areas.

Stage. Pre-seed. No funding round is public (UNKNOWN, not zero); the scenario assumes a small angel round and keeps the company at pre-seed.

Scenario assumptions

KUUZA sells AI roleplay simulation and coaching to contact-centre and B2B sales teams. The scenario assumes enterprise subscriptions priced per seat, sold founder-led and through contact-centre associations in Nigeria and Kenya, with all figures in USD and measured to 30 September 2026.

Paying accounts (Sep 2026)	14 (11 Nigeria, 3 Kenya)
MRR (Sep 2026)	USD 14,000 (USD 1,000 average per account: about 67 seats at USD 15 per seat per month)
ARR run-rate (Sep 2026)	USD 168,000
Revenue Q2 2026 / Q3 2026	USD 28,500 / USD 40,200 (+41% QoQ)
Contribution margin Q3 2026	71% (USD 28,550 on USD 40,200)
Blended CAC / payback	USD 5,000 per account / 7.0 months
Net revenue retention (Sep 2026)	111% (6 of 7 renewals, 1.3x seats)
Cash / net burn / runway	USD 180,000 / USD 9,500 per month / 19 months
Bottom-up accessible market	410,000 seats x USD 180 = about USD 74M per year

Why the score stops at 75

- Every synthetic source is USER_CLAIM with evidence status SELF_REPORTED, the most conservative status the rubric still grades (reliability 0.5).
- The engine caps any source at reliability 0.5 or below at grade 3, and grade 4 additionally needs reliability 0.85 or more (MULTI_SOURCE_SUPPORTED, EXTERNALLY_VERIFIED or PLATFORM_VERIFIED) plus sustained, dated execution. Structured metric rules never exceed 3.
- This scenario never claims verification or independent corroboration, so every graded criterion is at most 3 and the overall score is at most 25 × 3 = 75. A score of 90 or more is not legitimately reachable on synthetic evidence; reaching it would need corroborated or verified real evidence across most pillars.
- DOCUMENT_SUPPORTED (0.7) would not change the score, only confidence; it was not used because no supporting document exists for a synthetic figure.

- Confidence follows source reliability, not the score: with every source at 0.5 the confidence index equals 0.5 × coverage, so it reads MODERATE only when all 24 criteria are graded and LOW otherwise.

The 24 criteria

Criterion	Synthetic evidence (self-reported)	State	Grade
P1.A Relevant founder expertise	Founder and CEO previously built and led a Lagos aviation skills business that assesses crews on simulators; the technical cofounder has 8 years of experience building speech and conversational software.	OBSERVED	3
P1.B Adaptability and founder execution	The founders shipped the enterprise roleplay scorecard in July 2026 and changed the scoring rubric in response to customer feedback from 9 accounts.	OBSERVED	3
P2.A Accessible market demand	Bottom-up accessible market sized from customer spending of USD 180 per frontline seat per year (median of 14 paying accounts, Q3 2026) across about 410,000 contact-centre and B2B sales seats in Nigeria and Kenya, or about USD 74 million per year.	OBSERVED	3
P2.B Credible expansion path	Expansion into Kenya: 3 Nairobi contact-centre operators became paying customers between July 2026 and September 2026 through a signed distribution agreement with a local BPO association.	OBSERVED	3
P3.A Problem severity and willingness to pay	Signed purchase orders from 14 accounts cite the same problem: supervisors spend about 6 hours a week shadowing each new agent's live calls; orders average USD 1,000 per month.	OBSERVED	3
P3.B Repeated adoption or stage-appropriate tests	Retained customers: 6 of the 7 accounts whose first annual term ended between April 2026 and September 2026 renewed, at an average of 1.3 times their original seat count.	OBSERVED	3
P4.A Dated growth velocity	Recurring revenue grew 41% quarter on quarter in 2026: USD 28,500 in Q2 (April 2026 to June 2026) to USD 40,200 in Q3 (July 2026 to September 2026).	OBSERVED	3
P4.B Retention-supported traction	Recurring revenue from 14 subscribed accounts reached USD 14,000 MRR in September 2026 (USD 168,000 annualised); 92% is billed on annual subscriptions.	OBSERVED	3
P5.A Contribution economics and pricing	Positive contribution margin of 71% measured on Q3 2026 actual revenue of USD 40,200 after speech-model inference, hosting and onboarding costs of USD 11,650.	OBSERVED	3
P5.B Sustainable acquisition and monetization	Acquisition payback measured at 7.0 months for accounts won in Q2 2026 and Q3 2026: blended CAC of USD 5,000 per account against USD 710 monthly contribution per account.	OBSERVED	3
P6.A Differentiated assets	Proprietary dataset deployed in production scoring: 38,000 scored West African sales and service roleplay calls in English, Pidgin and Swahili, used by customers since June 2026.	OBSERVED	3
P6.B Independent defensibility test	(none: left ungraded)	UNKNOWN	—
P7.A Repeatable acquisition channels	Partner-led distribution channel through two contact-centre BPO associations is repeatable: it sourced 9 of the 14 paying accounts across Q2 2026 and Q3 2026.	OBSERVED	3
P7.B Organic pull or channel efficiency	Sales conversion from free demo to paid account measured at 18% for demos booked between April 2026 and September 2026; referrals from existing accounts sourced 4 new accounts in the same period.	OBSERVED	3
P8.A Runway and capital access	Current runway is 19 months at September 2026 net burn of USD 9,500 per month, from cash of USD 180,000 held on 30 September 2026.	OBSERVED	3
P8.B Relevant investor or strategic support	Strategic support executed in May 2026: a USD 250,000 angel round from two West African contact-centre operators, with an active agreement giving KUUZA supervised access to their agent floors.	OBSERVED	3

Criterion	Synthetic evidence (self-reported)	State	Grade
P9.A Critical function coverage	Technical, commercial and operational functions are covered: the technical cofounder leads a 4-person engineering team, a commercial lead runs enterprise sales, and an operations lead appointed in June 2026 runs customer onboarding.	OBSERVED	3
P9.B Time-bound delivery	Product milestones for 2026 were delivered on time: enterprise scorecard in July 2026, Kenya launch in August 2026 and multilingual voice in September 2026.	OBSERVED	3
P10.A Structural demand or technology shift	Technology shift documented: real-time speech models with sub-second latency became commercially available in 2024 and 2025, letting roleplay simulation replace supervisor call shadowing at a fraction of its cost.	OBSERVED	3
P10.B Ability to exploit the window	The market window is being used: KUUZA is deployed with 14 paying accounts in Nigeria and Kenya as of September 2026.	OBSERVED	3
P11.A Growth decoupled from costs	Revenue growth exceeds cost growth in actual 2026 results: Q3 2026 revenue rose 41% over Q2 2026 while total operating costs rose 12%.	OBSERVED	3
P11.B Repeatable deployment	Repeat deployments completed in 2026: one onboarding playbook took all 14 accounts across Lagos, Abuja and Nairobi live in under 10 working days each.	OBSERVED	3
P12.A Ecosystem access and partnerships	Ecosystem partnership executed in August 2026 with a Kenyan BPO association, giving its members discounted seats and co-delivered onboarding.	OBSERVED	3
P12.B Strategic adjacent opportunities	Strategic opportunity in hiring assessment has a signed customer: a Lagos bank licensed KUUZA roleplay scoring for graduate recruitment screening in September 2026.	OBSERVED	3

Criteria left ungraded

- **P6.B**: Independent defensibility test: the rubric's demonstrated anchor requires an independent (third-party) benchmark. Asserting one would be a claim of independent corroboration, which this scenario never makes, so the criterion is left UNKNOWN. An internal head-to-head test would grade only 2 (limited).

What real evidence would be needed

Real, current, investor-visible records for each criterion, at least document-supported, and corroborated or verified for a grade of 4. Company-specific gaps from public research:

- Legal entity and registration (no entity is named on kuuza.ai; Nigeria CAC status UNKNOWN).
- Published privacy policy and terms (the product records employee and consumer voice).
- Billing exports or bank statements behind MRR, revenue and cash; signed customer contracts and renewals.
- A third-party competitive benchmark against Second Nature, Hyperbound or Yoodli.
