Capital Q

Private capital runs on *information asymmetry.* Capital Q is built to reduce it — with evidence, not opinion.

Investor deck
October 2026

Cofounders
Zino Mario · David Nwankwo

Public page
fdncapitalpartners.com/capitalq/

An AI-native Investment Intelligence Operating System for private capital: founders become more investable, investors find and evaluate relevant opportunities, and both manage one shared relationship — with one institutional analyst, Q, throughout.

Category line from the locked Product Specification ◆ `Self-reported` · cofounders ● `Owner-provided` · public page published by FDN Capital Partners ■ `Verified public`
Every claim carries its evidence status or engineering evidence stage. Unknown stays unknown.

§01 — *Problem*

Founders cannot see how investable they are. Investors cannot see enough to decide quickly.

founders	investors
Do not know which evidence investors weigh, or what is missing	Screen inbound by hand, in inboxes, forms and spreadsheets
Repeat the same story to every investor in a different format	Mix self-reported claims with verified facts
Get silence instead of a reason	Lose the relationship history between tools

The public line: “Discovering the right investment opportunity shouldn’t take months. It should take minutes.” ◆ Self-reported · FDN page

evidence

Proposition: “reduce information asymmetry within private capital markets” — Product Specification Ch. 1 §3.1

◆ Self-reported · owner product source

GateQ is the “inbound layer”, Capital Q the “outbound and investment-relationship layer” — GateQ Feature Specification

◆ Self-reported

Problem framing is the product sources’ own; no third-party survey of the problem is cited

○ Unknown · external evidence

§02 — Solution

One institutional analyst — Q — across preparation, discovery, intake, diligence and the relationship.

One Q

Users experience one analyst. Specialists work inside it; none is user-selectable, and none talks peer-to-peer.

One record

One canonical company, one investor organisation, one company–investor relationship that both sides share.

Human say

Q has intelligence authority; people keep commercial authority. Prepare → Recommend → Approve → Execute.

What Capital Q is not: a marketplace, a CRM, a chatbot, a document store or a fundraising directory. Relationship state is computed from an append-only event history by a deterministic projector — never by a model.

evidence

"One institutional investment analyst throughout" — Final System Review §2

◆ Self-reported · owner product source

UNIQUE (company, investor organisation) relationship; GateQ and Discover resolve to the same row — research §8 deployed

Consequential actions need human approval bound to the exact payload — repository architecture

◆ Self-reported

§03 — *Working product*

Built and deployed — graded by what has actually been exercised.

Capability	What it does	Evidence stage
Q Intelligence	One analyst through a model gateway; Context Firewall filters by scope before any model call; voice, memory, Q Daily	`deployed` parts `live verified`
Discover & Explore	Precomputed, mandate-ranked pitch feed (no LLM in ranking); saved, passed, compare; Explore grid with closed-vocabulary reasons	`deployed`
GateQ	Embeddable branded inbound gateway: intake → standardise → Q interview → evaluate → rank → route	`live verified` fictional accounts
Relationship Hub	Append-only relationship events; deterministic state from Discovered to Investment or Pass	H1 `live verified` fictional accounts
Company profiles & documents	Canonical profiles; isolated document parser; founder-confirmed pitch readings; data room; Document Studio	`deployed`
Onboarding	Founder: upload what you have, Q works first. Investor: mandate quickly, then a personalised feed	`surface exists` time-to-feed unmeasured
Diligence workflow	Per-relationship diligence tab; data-room disclosure ownership	`deployed` end-to-end `not verified`

"Live verified" here means exercised on production with recorded evidence, using fictional `*@fictional.capitalq.local` demo accounts. A surface that exists is not proof that a journey works end to end.

§04 — Assessment

Scores appear only when the shared evidence supports them. *Unknown is never zero.*

Score	How it works
Investability 0–100	FDN's InvestIQ methodology, nine dimensions; InvestIQ overall × 25. Investor-eligible evidence only, identical for every investor. Below coverage gates it reads "not enough shared evidence yet".
Suitability out of 10	Fit to this investor's mandate. Never blended with Investability on display. Ranking after hard eligibility uses fit-order.v2: Suitability 0.75, Investability 0.25.
Unicorn Potential 0–100, premium	Deterministic indicator of present evidence against a 12-pillar, 24-criterion method. "Not a probability or validated forecast." Production: **0 of 461** companies have a numeric score — evidence coverage is below the 60% gate.

This deck does not call Unicorn Potential a "predictor". InvestIQ constants are hypotheses pending calibration on 3–5 real FDN companies.

evidence

InvestIQ is FDN Capital Partners' proprietary methodology; Capital Q implements it — ADR 0068
● Owner-provided

Investability and Suitability with coverage gates — ADR 0074 deployed

Unicorn Potential — ADR 0076; 0 numeric of 461 — STATE.md, coverage audit 2026-10-18 deployed

461 includes seeded demo companies; not a customer count
▵ Assumption

§05 — *Trust*

A two-sided product only works if neither side can be used against the other.

Context Firewall. Founder-private information never silently alters investor-facing ranking, discoverability or assessment. Release-blocking, enforced at retrieval, features and the database.

No pay-to-rank, ever. Payment never influences ranking.

Deterministic, explainable ranking. Versioned configuration; no model in the feed's ranking path; never optimised for watch time.

Three separate evidence axes. Truth class, evidence status and lifecycle are kept apart; contradictions coexist until reconciled.

EU data residency. Services in Railway europe-west4; database in Supabase eu-central-1.

evidence

Founder-private data invariant — Final System Review Finding 2
◆ Self-reported · owner product source

No pay-to-rank — ADR 0034 and root CLAUDE.md
● Owner-provided

Hosting and residency — STATE.md, ADR 0014
◆ Self-reported

§06 — *Market context*

A very large asset class, a fast-forming corridor, and buyers already adopting AI.

US$13T

Private markets AUM, late 2024; projected above US$20T by 2030 (BlackRock 2025 Private Markets Outlook).

US$6.7T

Private equity AUM at 31 March 2025 (Preqin data, cited in UK Parliament written evidence).

US$3.9bn

African venture funding 2025 across 506 deals, incl. US$1.8bn venture debt (AVCA). Partech: US$4.1bn, 570 deals. Africa: The Big Deal: US$2.2bn equity.

86%

of 1,000 US corporate and PE M&A professionals have adopted GenAI; 35% use it to find and evaluate targets (Deloitte 2025).

■ `Verified public` third-party estimates; projections labelled · businesswire.com/news/home/20241216468500/en · committees.parliament.uk/writtenevidence/157389/html/ · ecofinagency.com (AVCA 2025) · allafrica.com/stories/202601250064.html · businessday.ng (Africa: The Big Deal 2025) · deloitte.com/us/en/about/press-room/deloitte-survey-genai-in-mna.html · all fetched 2026-10-18. Africa figures differ by source and method; none is preferred here.

§07 — Sizing

TAM ≈ US$1.3bn · SAM ≈ US$9.6M · SOM ≈ US$0.6M ARR

Illustrative arithmetic, labelled Assumption — to be replaced by pipeline data.

TAM ▵ Assumption	US$13T private-markets AUM × 0.01% spent each year on sourcing, diligence and CRM software	≈ $1.3bn/yr
SAM ▵ Assumption	Africa–GCC: 1,500 investor organisations × US$6,000/yr (US$9.0M) + 20,000 fundraising companies × 5% Pro × US$600/yr (US$0.6M)	≈ $9.6M/yr
SOM ▵ Assumption	3 years: 5% of investor organisations (75 × US$6,000 = US$0.45M) + 25% of founder revenue (US$0.15M)	≈ $0.6M ARR
fee ▵ Assumption	Sensitivity only: a 1% facilitation fee on a 1% platform share of AVCA's US$3.9bn deployed	≈ $0.39M/yr

evidence

Only the US$13T and US$3.9bn bases are sourced
■ Verified public

Every percentage, organisation count and price is an analyst assumption
▵ Assumption

No prices are set in any source — ADR 0034
○ Unknown · pricing

Facilitation fee is a founder direction (2026-09-29), not a locked source, and needs regulatory analysis
● Owner-provided

§08 — *Business model*

Revenue from proprietary strategic value and optional execution — *not* from restricting knowledge.

Layer 1

Diagnosis — free.

Layer 2

Strategic Intelligence — "Pro": the Capital Readiness Blueprint, investor-specific recommendations.

Layer 3

Human Execution — optional, by specialist teams (FDN advisory).

Billing design (proposed): plans, entitlements and metering as versioned data. Gated features are the model-heavy ones — rehearsals, "Q handles it" delegations, AI images, web research, Q Daily, GateQ gateway count, premium scores and filters. Every account is on a generous launch default today.

evidence

Three-layer model — PADL Ch. 5 Decision #85, locked
- Owner-provided

Billing — ADR 0034, status PROPOSED
not live

Prices: none set in any source
- Unknown

Revenue and paying customers: none evidenced
- Unknown

§09 — *Segments & distribution*

Three users, one relationship graph.

founders	investors	gateway operators
Companies raising capital	VCs, angels, family offices, corporate and government investors	Funds, accelerators, investment-promotion agencies
Free diagnosis first; Pro for the Blueprint	Mandate in minutes, then a ranked feed	GateQ on their own site

Distribution. The FDN CapitalQ™ page runs “Join the Waitlist” and “Book a Demo”. FDN Capital Partners lists offices in Doha and Lagos, and the prepared demo journeys centre on an Africa → Arabia corridor. FDN provides the optional human-execution layer.

evidence

CTAs on fdncapitalpartners.com/capitalq/
◆ Self-reported

FDN offices Doha, Qatar and Lagos, Nigeria — no addresses published
◆ Self-reported

Invest Qatar and the “Qatar Five” are prepared demo entities — not partnerships
◆ Self-reported · repo decision log

Waitlist size and pilots
○ Unknown

§10 — Competition

Capital Q spans jobs that today live in four separate tool categories.

Job	Named alternatives	Capital Q's claimed difference ◆ Self-reported
Private-capital data and deal sourcing	PitchBook, Crunchbase, Grata, Harmonic, Tracxn, Dealroom; in Africa, Briter Intelligence and Africa: The Big Deal	Evidence-first assessments with explicit unknowns
Investor relationship CRM	Affinity, Intapp DealCloud, 4Degrees, Attio	One canonical relationship shared by both sides
Inbound deal-flow intake	Intake forms, Airtable and Typeform workflows, Visible.vc, DocSend-style data rooms	GateQ with a Q interview, resolving to the same record
Founder readiness and fundraising tools	VC4A (Africa), Visible, Foundersuite, generic AI assistants	Context Firewall; no pay-to-rank; one Q end to end

Competitor list is illustrative (research §12); competitors' funding and pricing were not verified in this pass.

§11 — Defensibility

The moat is trust that compounds: evidence, relationships and a method investors can audit.

Evidence graph. Each confirmed claim moves a company from self-reported toward document-supported and verified, and stays with its provenance.

Shared relationship history. Both sides work on one append-only record — hard to replicate with a CRM on one side and a form on the other.

A named method. InvestIQ (FDN) and versioned scoring that refuses to score on thin evidence.

Neutrality as policy. No pay-to-rank is a commitment competitors that sell placement cannot copy.

▵ Assumption These compound only with enough evidence-rich companies and active investors; today most evidence is self-reported, so most scores stay hidden.

evidence

Differentiation claims — locked product sources
◆ Self-reported

Compounding argument — analyst reading
▵ Assumption

Calibrated scores need an FDN pilot cohort
▵ Assumption

§12 — *Traction*

Proof today is engineering proof. Commercial proof is still unknown.

evidenced

Four services deployed on Railway: web, api, q-api, workers `deployed`

GateQ text journey and Relationship Hub H1 exercised on production `live verified`

Premium Unicorn filters checked for authorization behaviour `live verified`

43 explicit organisation feature-access grants — access, not contracts ◆ `Self-reported`

not evidenced

Paying customers ○ `Unknown`

Revenue ○ `Unknown`

Waitlist size ○ `Unknown`

Pilot customers or signed LOIs ○ `Unknown`

evidence

Verification used fictional demo accounts — handoff 13–14 Oct and 18 Oct
◆ `Self-reported · repo handoff`

Companies in production scoring audits include seeded demo data — not customers
◆ `Self-reported · repo`

Unknown is not zero
○ `Unknown`

§13 — *Planning assumptions*

Planning assumptions — not actual results

No prices, revenue or costs exist in any source. These scenarios only scale the research's illustrative inputs.

Scenario ▵ Assumption	Investor orgs × US$6,000	Founder Pro × US$600	ARR
Early	25 → $0.15M	250 → $0.15M	$0.30M
Research SOM	75 → $0.45M	250 → $0.15M	$0.60M
Full SAM	1,500 → $9.0M	1,000 → $0.6M	$9.6M

Founder counts: 250 = 25% of the 1,000 Pro buyers in SAM (20,000 × 5%). Excludes any facilitation fee and FDN execution services.

evidence

All inputs are analyst assumptions
▵ Assumption

Cost drivers: model inference, voice and video vendors, video CDN, four services, hosted database
◆ Self-reported · research §14

Cost per active user
○ Unknown

Layer 3 is services revenue with people cost
● Owner-provided

§14 — *Roadmap*

Next: calibrate the method on real companies, then switch on billing.

from the repository and handoff

- InvestIQ calibration on an FDN pilot (v2)
- Unicorn inputs v4 and evidence-gap prompts
- Relationship Hub H2 · billing activation (ADR 0034)
- A custom app domain · certified Q Pitch tour

analyst options ▵ Assumption

- White-label GateQ for accelerators and investment-promotion agencies
- FDN-led pilot cohort to produce verified evidence and first calibrated scores
- Registry and accounting data partners to lift evidence status

Scalability. Software-light, model-heavy: the gated features are exactly the model-heavy ones, so cost scales with paid use.

evidence

Roadmap items — research §16 from STATE.md / ACTIVE-TASKS.md
◆ Self-reported · repo

Q Pitch claims are limited to its certification manifest; none is claimed here
◆ Self-reported · repo rule

Calibration timeline
○ Unknown

§15 — Team

Cofounders from private capital and aviation operations.

Zino Mario

Cofounder ● Owner-provided

Partner (Vision, Growth & Governance), FDN Capital Partners ◆ Self-reported · FDN team page

Founder and CEO of Zino Aviation, Lagos

■ Verified public · press

His personal site does not list Capital Q

■ Verified public · observed

David Nwankwo

Cofounder ● Owner-provided

Managing Partner (Strategy, Capital & Ecosystem), FDN Capital Partners ◆ Self-reported · FDN team page

Credited on the FDN team page with creating Capital Q ◆ Self-reported

Background in private capital, wealth management, investment immigration and venture advisory

◆ Self-reported

evidence

Cofounder roles — owner-provided

● Owner-provided

Fortune Nwankwo, Partner (Operations, Product & Venture Execution) at FDN; role in Capital Q

○ Unknown

Cap table and roles

○ Unknown

§16 — *Risks*

The hardest risks are regulatory and evidential — and both are named.

Risk	Why it matters	Mitigation ▵ Assumption
Investment-advice and securities rules — Nigeria SEC (ISA 2025), QFC/QFMA, EU MiFID/ECSP, US	Matching, scoring investability and a facilitation fee may trigger broker, adviser or crowdfunding regimes	Capital-form advice stays with human FDN advisory (PADL #74); legal analysis before any success fee
Score credibility	InvestIQ constants uncalibrated; Unicorn Potential has 0 numeric production scores; landing-page example values are illustrative	Coverage gates; calibrate on an FDN pilot; never market as prediction
Data protection — GDPR, NDPA 2023, Qatar PDPPL	Founder-private financial data; EU residency	Context Firewall at retrieval, feature and database layers
Ownership, naming and IP	Legal owner of the product unknown; InvestIQ belongs to FDN; ™ marks unregistered as far as known	Entity, IP assignment and FDN agreement before a raise
Operational maturity	Recent merge collisions broke production builds; credentials needing rotation	Release gates; rotate credentials
Two-sided cold start; model-vendor dependency	Value needs evidence-rich companies and active investors; voice and video rely on vendors	FDN-seeded cohort; gateway abstraction over providers

§17 — *Funding*

Funding: *to be confirmed by the founders.*

No raise, round size, valuation or use of funds is established in any source, and none is assumed here.

what the founders need to supply

- The legal entity that owns Capital Q's IP and contracts with customers, and its relationship to FDN Capital Partners
- Amount sought, instrument, valuation expectations and cap table
- Use of funds by line: calibration pilot, go-to-market, regulatory counsel, model and media costs
- Runway and monthly burn; funding raised to date

evidence

Legal entity
- Unknown

Commercial terms between FDN and Capital Q
- Unknown

Funding raised to date
- Unknown

§18 — *Opportunity*

A deployed, evidence-first operating system for private capital — ready for its first calibrated cohort.

the opportunity

Deployed product across founders, investors and gateways `deployed`

A large asset class adopting AI in deal work

■ Verified public

Trust architecture as a product feature ◆ Self-reported

A distribution and execution partner in FDN

● Owner-provided

next steps

Entity, IP and FDN agreement

Pricing and facilitation-fee decision with regulatory analysis

Waitlist, pilots and any LOIs

Calibration timeline; trademark status
