SongScribe AI — illustrative high-growth scenario

Illustrative high-growth scenario — synthetic evidence. Not the company's actual performance. Every figure below is invented for illustration. The company's real Capital Q assessment is separate and is computed only from its own evidence.

Scenario illustrative-high-growth-v1 · Unicorn Potential method unicorn-potential.v1.0.0 (input rules unicorn-potential-inputs.v4) · Investability method investiq/v2+investability-inputs.v3 · engine unchanged · clock 2026-10-18T00:00:00.000Z

Result on synthetic evidence

Unicorn Potential: 75/100 · STRONG_SIGNALS · confidence LOW · coverage 96% · stage band PRE_SEED

Investability (reported separately): 58/100 · INVESTABLE · confidence LOW · provisional · 3/46 criteria, 0/8 areas.

Stage. Pre-seed. The UK entity was incorporated on 2026-02-13 and no funding is public (UNKNOWN, not zero); the scenario assumes a small pre-seed SAFE and keeps the company at pre-seed.

Scenario assumptions

SongScribe generates custom songs, jingles and background music from a prompt. The scenario assumes monthly credit subscriptions for consumers and creators plus commercial and exclusive licences for brands, churches and agencies, sold in Nigeria, Ghana, Kenya and the UK diaspora, with all figures in USD and measured to 30 September 2026.

Paying subscribers (Sep 2026)	2,900 (2,260 Nigeria and UK, 640 Ghana and Kenya)
MRR (Sep 2026)	USD 46,400 (blended USD 16 per subscriber)
ARR run-rate (Sep 2026)	USD 556,800
Revenue Q2 2026 / Q3 2026	USD 96,000 / USD 128,600 (+34% QoQ)
Contribution margin Q3 2026	58% (USD 74,600 on USD 128,600)
Blended paid CAC / payback	USD 38 per subscriber / 4.1 months
Cohort retention	71% of the January 2026 paying cohort still paying in September 2026
Cash / net burn / runway	USD 240,000 / USD 15,000 per month / 16 months
Bottom-up accessible market	1.2 million music buyers x USD 192 per year = about USD 230M per year

Why the score stops at 75

- Every synthetic source is USER_CLAIM with evidence status SELF_REPORTED, the most conservative status the rubric still grades (reliability 0.5).
- The engine caps any source at reliability 0.5 or below at grade 3, and grade 4 additionally needs reliability 0.85 or more (MULTI_SOURCE_SUPPORTED, EXTERNALLY_VERIFIED or PLATFORM_VERIFIED) plus sustained, dated execution. Structured metric rules never exceed 3.
- This scenario never claims verification or independent corroboration, so every graded criterion is at most 3 and the overall score is at most 25 × 3 = 75. A score of 90 or more is not legitimately reachable on synthetic evidence; reaching it would need corroborated or verified real evidence across most pillars.
- DOCUMENT_SUPPORTED (0.7) would not change the score, only confidence; it was not used because no supporting document exists for a synthetic figure.

- Confidence follows source reliability, not the score: with every source at 0.5 the confidence index equals 0.5 × coverage, so it reads MODERATE only when all 24 criteria are graded and LOW otherwise.

The 24 criteria

Criterion	Synthetic evidence (self-reported)	State	Grade
P1.A Relevant founder expertise	Founder and CEO previously built and led two Lagos businesses with founder-led consumer marketing; the technical lead has 7 years of experience in audio signal processing and audio ML.	OBSERVED	3
P1.B Adaptability and founder execution	The founders shipped Nigerian-language vocal generation in March 2026 and changed the pricing tiers in response to customer feedback from 400 subscribers in May 2026.	OBSERVED	3
P2.A Accessible market demand	Bottom-up accessible market sized from customer spending of USD 192 per paying subscriber per year (Q3 2026 average) across about 1.2 million creators, churches and small businesses in Nigeria, Ghana, Kenya and the UK diaspora that buy music today, or about USD 230 million per year.	OBSERVED	3
P2.B Credible expansion path	Expansion into Ghana and Kenya launched successfully in July 2026 with mobile-money checkout: 640 of the 2,900 paying subscribers at September 2026 are in those two countries.	OBSERVED	3
P3.A Problem severity and willingness to pay	Paying customers buy SongScribe for one problem: a custom song or jingle from a studio costs USD 150 to USD 600 and takes about two weeks; 2,900 subscribers paid in September 2026.	OBSERVED	3
P3.B Repeated adoption or stage-appropriate tests	Retained customers: 71% of the January 2026 paying cohort was still subscribed in September 2026, and 38% of brand and church accounts made repeat purchases of new tracks.	OBSERVED	3
P4.A Dated growth velocity	Subscription revenue grew 34% quarter on quarter in 2026: USD 96,000 in Q2 (April 2026 to June 2026) to USD 128,600 in Q3 (July 2026 to September 2026).	OBSERVED	3
P4.B Retention-supported traction	Recurring revenue from 2,900 subscribers reached USD 46,400 MRR in September 2026 (USD 556,800 annualised).	OBSERVED	3
P5.A Contribution economics and pricing	Positive contribution margin of 58% measured on Q3 2026 actual revenue of USD 128,600 after GPU generation, payment processing and rights-clearance costs of USD 54,000.	OBSERVED	3
P5.B Sustainable acquisition and monetization	Acquisition payback measured at 4.1 months for subscribers acquired in Q3 2026: blended paid CAC of USD 38 against USD 9.28 monthly contribution per subscriber.	OBSERVED	3
P6.A Differentiated assets	Proprietary dataset deployed in the production model: 120,000 commissioned Afrobeats, highlife, gospel and Nigerian-language vocal stems, owned outright and used by customers since March 2026.	OBSERVED	3
P6.B Independent defensibility test	(none: left ungraded)	UNKNOWN	—
P7.A Repeatable acquisition channels	Short-video acquisition channel is repeatable: creator clips sourced 61% of new subscribers in every month from April 2026 to September 2026.	OBSERVED	3
P7.B Organic pull or channel efficiency	Referrals measured: every shared song carries a SongScribe link, and referrals sourced 27% of new paying subscribers between April 2026 and September 2026.	OBSERVED	3
P8.A Runway and capital access	Current runway is 16 months at September 2026 net burn of USD 15,000 per month, from cash of USD 240,000 held on 30 September 2026.	OBSERVED	3
P8.B Relevant investor or strategic support	Strategic support executed in March 2026: a USD 350,000 pre-seed SAFE from two music-industry angels, with an active agreement giving SongScribe access to a Lagos studio's session vocalists.	OBSERVED	3

Criterion	Synthetic evidence (self-reported)	State	Grade
P9.A Critical function coverage	Technical, commercial and operational functions are covered: a 3-person audio ML and engineering team, a growth and partnerships lead, and an operations lead appointed in May 2026 who runs rights clearance and support.	OBSERVED	3
P9.B Time-bound delivery	Product milestones for 2026 were delivered on time: Nigerian-language vocals in March 2026, Ghana and Kenya checkout in July 2026 and the agency licence tier in September 2026.	OBSERVED	3
P10.A Structural demand or technology shift	Technology shift measured: generative music models reached commercial vocal quality in 2024 and 2025, and IFPI reported Sub-Saharan Africa as the second-fastest-growing recorded music region in 2024 (+22.6%).	OBSERVED	3
P10.B Ability to exploit the window	The market window is being used: SongScribe is deployed with 2,900 paying subscribers in Nigeria, Ghana, Kenya and the UK as of September 2026.	OBSERVED	3
P11.A Growth decoupled from costs	Revenue growth exceeds cost growth in actual 2026 results: Q3 2026 revenue rose 34% over Q2 2026 while total operating costs rose 15%.	OBSERVED	3
P11.B Repeatable deployment	Repeat deployments completed in 2026: localised checkout, pricing and language packs went live in Ghana in July 2026 and Kenya in August 2026 using the Nigeria playbook.	OBSERVED	3
P12.A Ecosystem access and partnerships	Platform partnership active since June 2026 with a church-media network, delivering in-app ordering to 1,400 member churches.	OBSERVED	3
P12.B Strategic adjacent opportunities	Strategic opportunity in sonic branding has a signed customer: a Lagos consumer-goods brand licensed an exclusive campaign anthem and jingle set in August 2026.	OBSERVED	3

Criteria left ungraded

- **P6.B**: Independent defensibility test: the rubric's demonstrated anchor requires an independent (third-party) benchmark. Asserting one would be a claim of independent corroboration, which this scenario never makes, so the criterion is left UNKNOWN. An internal listening test against Suno or Udio would grade only 2 (limited).

What real evidence would be needed

Real, current, investor-visible records for each criterion, at least document-supported, and corroborated or verified for a grade of 4. Company-specific gaps from public research:

- Reconcile the contracting entity: the Terms name 'SongScribe Ltd' (Nigerian law) while the UK register shows SONGSCRIBE AI LTD (17031583).
- Rights evidence for training data and vocal stems (licences, commissioning contracts, takedown process).
- One consistent public price list (four tier schemes and $179 vs $199 conflict on the live site).
- Billing exports for subscribers, MRR, cohort retention and refunds; bank statements for cash.
